1001 機械系博士班資格考試題目

考試科目	方式
設計製造	Closed Book,不可使用計算機 Part I

1. Name four categories of traditional manufacturing processes, 20%
provide 2 specific name of manufacturing processes in each categorie and
provide short descriptions.
2. Name four categories of non-traditional manufacturing processes, 20%
provide 2 specific name of manufacturing processes in each categorie and
provide short descriptions.
3. (i) describe rapid prototyping; 5%
(ii) explain reverse engineering. 5%

1001 機械系博士班資格考試題目

考試科目	方式	
設計製造	Closed Book, 不可使用計算機	Part II

1. A Bezier can be expressed by the following parametric equation:

$$P(u) = P_0(1-u)^3 + P_1 3u(1-u)^2 + P_2 3u^2(1-u) + P_3 u^3, \quad 0 \leq u \leq 1$$

Assume the coordinates of the 4 control points are, $P_0=(1, 3)$, $P_1=(3, 5)$, $P_2=(5, 4)$, $P_3=(7, 1)$, draw the control polygon(5%). Plot 5 points on the curve at $u=0$, $u=0.2$, $u=0.5$, $u=0.8$, and $u=1$, and roughly plot the curve. (5%)

2. Calculate the direct shear stress in the pin and bolts in the following figures (5% each).

(a) $P=500N$

(b) $T_0=100N\ m$

3. The following figure (left) is a simple four-bar linkage mechanism.

(1) Why is the four-bar linkage mechanism so important? (6%)

(2) Give the names of the 4 links. (4%)

4. What is a “light dependent resistor (LDR)”? Give 2 examples of its applications. (5%) What is a “light emitting diode (LED)”? Give 2 examples of its applications. (5%)

5. Explain the following “human-machine system” using the elevator of Building 3 as an example.
(10%)
